## When it comes to quality insulation, we've got it covered

**Yamato insulation** is just about the best invention. By using continuous running of insulation it can reduce the overall installation time by half and prevents condensation.

Yamato features a special polyethylene outer film that prevents creasing & torn during installation and helps to protect the insulation when passing the coil through difficult spaces. What's more, it provides UV resistance to the inner insulator.

All this makes Yamato easier to install and ensures ultra-long-life performance. Resistance to abrasion and wear and tear. Yamato insulation has passed a stringent lab test on condensation factor with a high humidity at +95% environment and a harsh room temperature different between, -30 deg C, + 45 deg C. So when you want the job done fast with reliability, get Yamato, offered only at **BEST TECH**.

**+ Reduce Installation Time by up to 50%**

施工時間を最大50%しよ削減!

**+ Prevents Creasing and Improves Durability**

しわの防止、耐久性の向上!

**+ UV Resistance and Increases Performance**

耐UV性とパフォーマンスの向上!

5 BENEFITS

Yamato Insulation:

Extra High Performance Copper Tube  
エクストラハイパフオーマンス銅管

High K-factor Cross-linked Polyethylene  
高Kファクタ架橋ポリエチレン

Advance Polyethylene Foam Protection  
アドバンスポリエチレン泡の保護

Tough Embossed UV Resistance Polyethylene Film  
アドバンスポリエチレン泡の保護

**Engineered to the finest detail for unsurpassed performance and durability**

卓越した性能と耐久性を実現した詳細設計

### Your Aircon Will Be Installed Faster!

Rapid installation time lets you get your aircon up quicker - in less than half the average installation time.

### Start Say Sayonara To Water Leaking!

The insulation has unlimited length thus eliminating unnecessary joining and cutting for better sealing.

### Ideal For Your Complex Renovation Needs!

Protected by a tough outer polyethylene film. The copper layer of coil can be pushed through tight spaces without damaging the insulation.

### Lesser Cool Lost So You Can Save Even More!

High K value than usual insulation used in the market, has lesser cool lost thus increases performance. Saves more energy and lessen your electrical bills in the long run.

### Safe & Compatible With All Aircon Systems!

R410A refrigerant is currently the market's leading and most commonly used gas for aircons. Yamato's insulation comes in various sizes that are best suitable for use with R410A.
